The data used to calculate the AM Delay Rate, PM Delay Rate, AM LOTTR, and PM LOTTR for each roadway segment can be found on the following pages.

NOTES:

- Corridor, To-From: this reflects our updated corridor boundary points due to the available TMCs, which may differ slightly from the previous corridor limits
- Length: one-way distance in miles
- All travel times and delays in minutes
- All speeds in miles per hour
- FF Travel Time: this is taken as the 5th percentile travel time. We will replace once we receive the updated free flow speeds from City of Wilmington
- AM 3Hr TT, PM 3Hr TT: these are the average corridor travel times for the two peak periods (6-9am and 3-6pm, respectively)
- AM High TT Hour, PM High TT Hour: the hour experiencing the highest average travel time
- AM 3Hr Delay, PM 3Hr Delay: the difference between the average travel time and free flow travel time during each peak period (6-9am and 3-6pm, respectively)
- AM 3Hr Delay Rate, PM 3Hr Delay Rate: the delay divided by the corridor length (minutes/mile)
- AM High TT, PM High TT: the average travel time for the hour with the highest average travel time (for each peak period)
- AM High Delay, PM High Delay: the average delay for the hour with the highest average delay (for each peak period)
- TT_50_6, TT_50_7, etc.: the 50th percentile travel time for the 6:00-7:00am hour, the 7:00-8:00am hour, etc.
- TT_80_6, TT_50_7, etc.: the 80th percentile travel time for the 6:00-7:00am hour, the 7:00-8:00am hour, etc.
- TT_95_6, TT_50_7, etc.: the 95th percentile travel time for the 6:00-7:00am hour, the 7:00-8:00am hour, etc.
- AM High Hour Median TT: the 50th percentile travel time for the AM peak hour (identified by the highest travel time)
- AM High Hour 80th TT: the 80th percentile travel time for the AM peak hour (identified by the highest travel time)
- AM High Hour LoTTR: The 80th percentile travel time divided by the median travel time for the AM peak hour (identified by the highest travel time)

Hot Spot Analysis Note:

The hotspot analysis is a planning-level screening that identifies potentially deficient intersections based on peak season traffic and a series of assumptions about peaking (K-factor), directionality (D-factor), and signal timing. While it still uses the same grading system, this analysis differs from a traditional TIA in that it is not nearly as detailed. The intent of the hotspot map is to help identify corridors with potential improvement needs, or identify study intersections for a TIA.
